PROFILE

I am a dedicated senior software engineer with over seventeen years of experience creating dynamic and user-friendly web applications across law, education, and digital marketing industries, consistently delivering solutions that excite and delight customers. I pride myself on writing code that loads quickly, is maintainable, and provides an excellent user experience.

EXPERIENCE

Field Safety Supervisor

February 2024 – Present

Durham School Services | Everett, Washington

Durham School Services is a national student transportation provider delivering safe, reliable school bus services to school districts across the United States. The Everett, Washington location employs approximately 170 staff and operates 140 routes, supporting daily transportation operations, driver training, fleet maintenance, safety, and coordination with the school district.

- Managed license, medical, and safety-certification compliance for approximately 160 drivers, using renewal tracking and advance reminders to keep requirements visible.
- Replaced paper incident reporting with an online workflow built in Power Automate, cutting report-routing time from about one week to a few minutes.
- Reworked CDL training paperwork and processes, reducing the training timeline from three months to two months.
- Maintained a reported 100% CDL exam pass rate while coordinating candidate paperwork and state clearance requirements.
- Replaced time-consuming physical video retrieval with an online lookup process.

Senior Web Application Developer

February 2019 – February 2023

Davis Wright Tremaine | Seattle, Washington

Davis Wright Tremaine is a national law firm headquartered in Seattle, Washington, with more than 600 attorneys nationwide. The firm provides legal services to businesses and organizations across areas including litigation, corporate law, employment, intellectual property, and technology.

- Built .NET applications with SQL Server, ASP.NET, and .NET Core that gave legal teams centralized access to client and project information.
- Introduced Vue.js into the firm’s application work, earning leadership support for a modern framework for interactive internal tools.
- Developed request, work-allocation, and approval workflows that helped lawyers and paralegals assign work, coordinate reviews, and track handoffs.
- Implemented tablet-based conference-room scheduling so employees could check availability and book rooms on site or in advance.
- Automated email-triggered tasks with Power Automate and contributed to a nine-office directory, reducing friction in routine coordination and colleague lookup.

Senior Application Developer

February 2016 – February 2019

Brayton Purcell | Novato, California

Brayton Purcell is a law firm headquartered in Novato, California, specializing in asbestos, toxic exposure, personal injury, and wrongful death litigation. The firm represents clients nationwide and has more than 40 attorneys supported by over 200 staff members, including dedicated investigative and research teams.

- Automated claims submissions with Selenium against legacy insurer websites, replacing repetitive manual data entry where APIs were unavailable.
- Rebuilt stalled applications with Vue.js and modernized legacy tools, returning neglected systems to service and improving maintainability.
- Digitized paper-heavy, department-specific workflows to make information easier to access and share across previously siloed teams.
- Turned an internal archive of ship-service records into an online data product that other law firms could purchase access to.

Frontend Application Developer

August 2015 – December 2015

Clorox | Oakland, California

The Clorox Company's marketing department in Oakland, California, develops and manages marketing strategies for well-known consumer brands such as Fresh Step, Hidden Valley, and Glad.

- Built campaign landing pages and microsites for Fresh Step, Hidden Valley Ranch, and GLAD, supporting multiple national consumer brands.
- Contributed to Fresh Step's Paw Points loyalty experience, enabling customers to earn and redeem rewards or donate points to animal rescues.

Senior Programming Analyst

April 2015 – July 2015

Sonoma County | Santa Rosa, California

Sonoma County is a county located in the northern part of California's San Francisco Bay Area. The county government provides a wide range of services to residents, including public safety, health and social services, infrastructure maintenance, and community development.

- Built an Angular public search tool with map and address lookup, helping residents find restaurant health inspections and safety records.
- Delivered the contract application in about three months—half the planned schedule—and it remained in use after completion.

Frontend Application Developer

April 2014 – April 2015

Littler Mendelson | San Francisco, California

Littler Mendelson is a law firm headquartered in San Francisco, California, specializing in labor and employment law. The firm provides legal services to employers across various industries, helping them navigate complex employment regulations and workplace issues.

- Built interactive reporting and workflow tools helping lawyers filter records and track project status.
- Optimized SQL stored procedures, reducing some report processes from several minutes to under 15 seconds.
- Replaced image-based reports with selectable, shareable web visualizations that preserved filters and made findings easier to review and reuse.

Web Developer

June 2013 – March 2014

Innovative Interfaces | Emeryville, California

Innovative Interfaces is a company that provides integrated library system (ILS) software and services to libraries. Their solutions help libraries manage their collections, streamline operations, and enhance the user experience for patrons.

- Maintained the company-wide SharePoint intranet and built department tools, helping staff document processes and find information for daily work.
- Contributed to a library-software review system that let customers submit structured product feedback.

Web Developer

May 2012 – June 2013

Juxta Labs | San Mateo, California

Juxta Labs was a mobile gaming and social media company based in San Mateo, California. The company developed social games and mobile applications designed to connect people through shared experiences, competition, and nostalgia, including games such as WordTag and its Yearbook app.

- Built features for Facebook-connected social products, including music sharing and class-year communities that helped users connect around shared interests and school networks.
- Developed interactive JavaScript word-game mechanics and friend challenges, bringing competitive play into the social platform.

Web Developer

January 2009 – May 2012

Massive Cake | Sacramento, California

Massive Cake is a web development and digital marketing agency based in Sacramento, California. The company specializes in creating custom websites, e-commerce solutions, and online marketing strategies for clients across various industries.

- Ran web and digital-marketing projects for local businesses end to end, from requirements and design through development and launch.
- Built a coordinated web presence for a finance author, combining book sites, an author site, advisory pages, and release announcements to support promotion.
- Created lead-generation sites and secure contact forms for local businesses, turning service information into clear paths for customer inquiries.

Web Developer

June 2006 – December 2018

Eye Candy Marketing | Rocklin, California

Eye Candy Marketing is a marketing and advertising agency located in Rocklin, California. The company focuses on providing creative marketing solutions, including branding, digital marketing, and promotional campaigns for businesses in the region.

- Delivered client websites and custom features across Drupal, WordPress, JavaScript, PHP, and Django, adapting the technology to each project's needs.
- Built an online shirt designer and ordering flow for an embroidery client, letting customers customize products, pay online, and send orders directly to the business.
- Created a custom WordPress location search that used a customer's address to identify nearby hearing-aid retailers.
- Produced web, print, and event materials for regional businesses, extending client campaigns across digital and in-person channels.

AWARDS AND CERTIFICATIONS

- 1st Place Standup Comedy Winner
- First Aid Certified
